SUMMARY

AI Engineering Leader building production AI systems using multi-agent orchestration, LangGraph, RAG pipelines, and the Model Context Protocol (MCP). Built and operate a full-stack AI stock analysis platform with 14 production features — including a 5-agent specialist system, LangGraph conditional routing, vector embeddings, and autonomous WhatsApp briefings — all at zero infrastructure cost. At Entain India, architected an enterprise AI-Powered Test Automation Framework with MCP servers across Jira, GitLab, TestRail, and Xray, reducing test design time by 80% and code generation by 75%. 21 years of engineering leadership across product companies.

AI ENGINEERING SKILLS

Multi-Agent & Orchestration: LangGraph (StateGraph, Conditional Routing) · Multi-Agent Systems · ReAct Agents (Tool-Calling) · Agent Orchestration · Synthesis Agents · AI Workflows

LLM & RAG: RAG (Retrieval-Augmented Generation) · Google Gemini API · OpenAI API · Prompt Engineering · LLM Tool Calling · Vector Embeddings (768-dim) · Semantic Search · SSE Streaming · Context Management

MCP & Tool Integration: Model Context Protocol (MCP) · MCP Server Development (Python, Node.js) · MCP Client Integration · Tool Definition · Cross-System AI Bridges

AI Infrastructure: Upstash Redis · Upstash Vector DB · Multi-Key API Rotation · Rate Limit Resilience · Hybrid Caching · AI Observability · LLM Cost Optimization · Graceful Degradation

Full-Stack: TypeScript · Node.js · Express · React · Python · REST APIs · Server-Sent Events · Microservices · Vercel · Render

Engineering Leadership: Team Management · Technical Mentoring · Engineering Strategy · Stakeholder Management · AI Adoption Roadmap

FEATURED PROJECT

AI Stock Portfolio Analyzer (Production)

Live: stock-portfolio-analyzer-ten.vercel.app | **GitHub:** github.com/kmnaidu/stock-portfolio-dashboard

Full-stack AI analysis platform — 14 features, \$0/month infrastructure, 50+ days in production:

Feature	AI Pattern
5-Agent Deep Analysis	Multi-Agent orchestration with Synthesis layer
LangGraph Decision Agent	Conditional StateGraph routing (7 nodes)
ReAct Chat Agent	LLM tool-calling, 4 tools, 5 reasoning rounds
RAG Pipeline	Yahoo Finance + Google RSS + Redis → Gemini
Vector Similarity Search	Gemini Embeddings (768-dim) + Upstash Vector
MCP Server (5 tools)	Live Indian market data for any AI IDE
Daily WhatsApp Briefing	Autonomous agent: launchd → Gemini → Twilio
Hybrid Cache	In-memory (30s) + Redis (1-day TTL), 95% hit rate
AI Observability	Every LLM call tracked — model, timing, success
Multi-Key Resilience	4 keys × 3 models = 12 fallback attempts
SSE Streaming	Word-by-word real-time AI responses

Tech Stack: React · TypeScript · Node.js · LangGraph · Google Gemini · Upstash Redis · Upstash Vector · Twilio · Vercel · Render

Production Metrics: 12,400+ LOC · 50ms cached response · 95% LLM success rate · 32 stocks tracked

EXPERIENCE

AI Engineering Lead | Automation Manager

Entain India (formerly Ivy Comptech) — Ladbrokes, Coral Sportsbook Sep 2019 – Present | Hyderabad | 6 yrs 10 mos

AI Engineering & Innovation (2024–Present):

- Architected an AI-Powered Test Automation Framework integrating multi-agent orchestration, MCP servers, AI steering files, and event-driven hooks
- Built MCP integrations for Jira Cloud, GitLab API, TestRail, Xray, and a custom Project Bridge — enabling AI to search code across repos, automate test case design, and manage workflows end-to-end
- Designed specialist AI agents: Ticket Analyst, Test Designer, Frontend Expert, API Expert, Code Reviewer, Quality Gate — orchestrated in phased workflows with conditional routing
- Implemented AI Steering Files encoding team standards and conventions, loaded conditionally based on context
- Configured event-driven AI Hooks for quality gates, automated linting, Gherkin validation, and post-task test execution
- Driving company-wide AI adoption strategy and engineer enablement

Impact Metrics:

- Test case design: 2-3 hours → 15-30 min (80% faster)
- Code generation: 4-6 hours → 30-60 min (75% faster)
- PR review cycle: 1-2 days → same-day (50% faster)
- Cross-repo search: 30+ min → <30 sec (98% faster)
- SDET onboarding: 2-4 weeks → 3-5 days (75% faster)

Team Leadership & Platform Automation (2019–Present):

- Currently leading 10 engineers (managed teams up to 20) automating Ladbrokes and Coral sportsbook platforms
 - 80% regression suite automation; architected frameworks using Java, Playwright, Selenium, Cypress, Cucumber, Karate DSL
 - Established CI/CD pipelines with Jenkins, BrowserStack, LambdaTest, TestRail
-

Lead Engineer

Scientific Games Pvt Ltd (WMS) | Aug 2012 – Aug 2019 | Pune | 7 yrs 1 mo

- Led test engineering for RGS casino games platform with regulatory compliance
 - Built automation using Selenium WebDriver, TestNG, JMeter performance testing
 - Automated COAT back office platform end-to-end
 - Managed cross-functional QA teams across multiple release cycles
-

Test Lead

AgreeYa Mobility | Nov 2011 – Aug 2012 | Pune | 10 mos

- Led BDD test automation using Cucumber + Selenium Ruby
 - Managed team of 4 engineers
-

Senior Software Engineer (Automation Test Lead)

Motorola Mobility | Apr 2010 – Nov 2011 | Hyderabad | 1 yr 8 mos

- Built Invader+ web automation framework with Selenium
 - Automated 40%+ of browser compliance test suite
-

Earlier Roles (2005 – 2010)

- **Azingo Inc.** (Senior QA Engineer) — JavaScript test development for mobile web widgets
 - **Mascon Global / Motorola Client** (Senior Software Engineer) — Bluetooth connectivity testing
 - **Tata Elxsi Ltd** (Test Engineer) — Bluetooth interoperability and stress testing across device portfolio
-

EDUCATION

MCA (Master of Computer Applications) — Andhra University | 2001 – 2004 **B.Sc Computer Science** — Andhra University | 1998 – 2001

AI CERTIFICATIONS & LEARNING

- Generative AI: Working with Large Language Models (LinkedIn Learning, 2025)
 - LangGraph & Multi-Agent Systems (production implementation)
 - Model Context Protocol (MCP) — server development and enterprise integration
 - RAG Architecture & Vector Embeddings (production implementation)
-

PUBLICATIONS & THOUGHT LEADERSHIP

- "How I Built an AI Stock Portfolio Analyzer Using RAG, Multi-Agents, LangGraph, Vector DB, and Redis" — LinkedIn & Medium
- "AI-Powered Test Automation Framework" — Enterprise document driving AI adoption
- 5 published technical articles on AI Engineering patterns (3,800+ total impressions, 80+ reactions)
- Open-source: github.com/kmnaidu/stock-portfolio-dashboard
- MCP server published — reusable across AI IDEs (Kiro, Cursor, Claude Desktop)
